

Mitigate Compliance and Privacy Risks Deployment

Identify, mitigate, and respond to compliance risks by using the tools you already own

We live in a time where digital technology is profoundly impacting our lives, from the way we connect with each other to how we interpret our world. The continuous data explosion has increased costs associated with compliance, litigation, and privacy. The way organisations manage security, identify risks, and maintain compliance has never been more critical. The Mitigate Compliance and Privacy Risks Deployment workshop will provide you with insights to help you take advantage of comprehensive, end-to-end workflows in Microsoft Purview and help you better investigate and respond to risks.

By attending this workshop, our experts will work with you to:

Help you understand how the Purview products and services you already own can improve your compliance posture and reduce privacy and compliance risks for your organisation.

Learn how Insider Risk Management will minimise internal risks by enabling you to detect, investigate, and act on malicious and inadvertent activities in your organisation.

Understand how the end-to-end workflow to preserve, collect, analyse, review, and export content provided by eDiscovery (Premium) will help you efficiently manage your organisation's internal and external investigations.

Develop a roadmap for an organisation-wide deployment of risk mitigation and compliance posture management, using the tools you already own.

By the end of this 5 day workshop you will have gained

- ✓ Insight into the current state of your Microsoft 365 service activation, as well as an overview of your requirements as they relate to Microsoft 365 compliance, governance, data discovery, and risk management solutions.
- ✓ Detailed guidance on suggested improvement actions to help you comply with the standards and regulations that are most relevant for your organisation.
- ✓ Operational Microsoft 365 Developer Tenant to be used as a functional reference point for reviewing design decisions or to review settings before transferring into production.
- ✓ A list of recommended activities and next steps that will lead towards a company-wide roll out of Microsoft Purview products and services to protect and govern sensitive data and mitigate compliance and privacy risks.
