

# Protect and Govern Sensitive Data Deployment

Protect data in your organisation with tools you already own

We live in a time where digital technology is profoundly impacting our lives, from the way we connect with each other to how we interpret our world. Protecting information—wherever it goes—is critical to ensuring trust and meeting compliance requirements. The Protect and Govern Sensitive Data Deployment workshop will help you to get started with protecting your sensitive information and raising end user awareness by using the products you already own.

By attending this workshop, our experts will work with you to:

Implement notification policies to increase end-user awareness of the privacy and regulatory risks of sharing sensitive data.

Introduce the organisation to Information Protection and Data Loss Prevention using the Microsoft Purview platform solution.

Help the organisation to quickly identify, triage, and act on risky user activity by implementing a basic Insider Risk Management system.

Develop a roadmap for an organisation-wide deployment of Information Protection and Data Governance, using the tools you already own.

By the end of this 5 day workshop you will have gained

- ✓ Insight into the current state of your Microsoft 365 service activation, as well as an overview of your requirements as they relate to Microsoft 365 compliance, governance, and risk management solutions.
- ✓ A findings overview, which lists and interprets privacy and regulatory risks identified by the DataProtect process and observed during the engagement.
- ✓ Recommendations that map the observed privacy and regulatory risks, user feedback, and assessment results to Microsoft Purview Information Protection and Data Lifecycle Management products in order to mitigate impact and improve the organisation's data protection posture.
- ✓ Recommended activities and next steps that will lead towards a company-wide roll out of Microsoft Purview products and services to protect and govern sensitive data and mitigate compliance and privacy risks.
