

# Secure Multi-Cloud Environments Deployment

Improve security posture and protection of hybrid and multi-cloud infrastructure workloads

Knowledge is power. In order to protect your most essential cloud-based data, and defend yourself against potential threats, you need a clear picture of your hybrid and multi-cloud security. The Secure Multi-Cloud Environments Deployment Workshop will help you to assess your current security posture, broaden the scope of protected resources, and develop a plan of action for remediation, using products you already own.

By attending this workshop, our experts will work with you to:

Assess your current environment and determine priorities for a hybrid and multi-cloud security and protection solution, utilising tools you already own.

Discover vulnerabilities and threats to your hybrid and multi-cloud workloads and develop strategies for mitigation, based on your specific needs.

Protect additional hybrid and multi-cloud resources by onboarding them to Microsoft Defender for Cloud.

Create a personalised plan for integrating Microsoft Defender for Cloud into your current security operations and determine actionable next steps.

By the end of this 5 day workshop you will have gained

- ✓ Insight into the current state of your hybrid and multi-cloud security posture management and threat protection with an analysis on requirements and priorities.
- ✓ Increased protection of additional hybrid and multi-cloud resources and a better understanding of how to prioritise and mitigate potential threats to all your existing resources and workloads.
- ✓ Recommendations for reducing the attack surface area for your hybrid and multi-cloud resources and workloads and in-depth guidance on how to integrate Microsoft Defender for Cloud into your security operations and reduce operational overhead.
- ✓ A defined, personalised plan for actionable next steps, including a timeline for remediations, based on your organisation's specific security needs and objectives.
